website: jamesbond.live · linkedin: linkedin.com/in/0xthejb · GitHub: github.com/bondzai

SUMMARY

Software engineer with 10+ years in engineering, 5+ of them designing and operating **distributed backend systems** in Go, Python, and JavaScript/TypeScript. I own **architecture end-to-end — service boundaries**, inter-service protocols (REST, gRPC, RabbitMQ Kafka), and the **infrastructure** it all runs on (APISIX, Nginx, Docker, AWS, GCP) — with production systems sustaining 3,000+ req/sec. I lead backend squads of 5–7 engineers, define engineering standards, and turn product goals into executable technical plans. Targeting **Senior Backend Engineer** and **Software Architect** roles.

EXPERIENCE

Vulcan Coalition Co., Ltd. Senior Software Engineer → Project Manager	Bangkok, Thailand (Hybrid) Jan 2026 – Present (8 months)
- Built the proof of concept that won an AI enterprise platform engagement with Thai Samsung Electronics (TSE); promoted to lead delivery end-to-end - Own architecture and technical decisions across frontend, backend, and infrastructure — service boundaries, engineering standards, and LLM-based automation in core product flows - Lead delivery of the SF+ Dealer Support Platform for TSE — UAT release cycles, client communications, and technical documentation for a team of 5 engineers - Designed a client-facing development log and status lifecycle protocol that cut communication issues by 80%	
Zero Friction Co., Ltd. Software Engineer	Bangkok, Thailand (Hybrid) May 2024 – Dec 2025 (1 year 8 months)
- Led a backend squad of 5–7 engineers across multiple services, owning architecture decisions, service boundaries, performance, and production reliability - Architected and maintained an advertisement delivery system handling 3,000+ req/sec and ~260M requests/day at peak load - Built and maintained Go-based modular microservices communicating over REST, gRPC, Kafka, and webhooks - Built real-time systems — chat, live bidding, location tracking, notification pipelines — using SSE, WebSocket, RabbitMQ workers, and Redis Pub/Sub - Configured and operated infrastructure on Ubuntu and Red Hat within Virtuozzo cloud, managing an Apache APISIX gateway and Nginx load balancing	
Swift Dynamics Co., Ltd. Backend Developer	Bangkok, Thailand (On-site) Nov 2022 – May 2024 (1 year 7 months)
- Built a real-time IoT metrics system for Airports of Thailand (AOT), integrating MQTT sensor data and sustaining 2,500+ req/sec at peak, with full-stack ownership of live analytics, automated alerts, and scheduled reporting - Reverse-engineered legacy recursive logic with custom data structures and hash-based algorithms, cutting runtime from 4 hours to ~10 seconds - Built MS Project-compatible scheduling supporting import/export of project plans spanning 10+ years	
Synergetech Co., Ltd. Automation System Engineer	Nonthaburi, Thailand (On-site) Jul 2016 – Jan 2022 (5 years 7 months)
- Built full-stack web applications to monitor and manage production storage systems for Lion Corp, designing the data model and integrating PLC/SCADA telemetry into SQL Server for operational visibility - Developed MES and database integration layers linking industrial control systems to enterprise software - Designed and delivered complete industrial control systems from the ground up — PLC automation, Wonderware ArchestrA SCADA, fiber-optic networking across buildings, and self-hosted VMware vSphere/ESXi infrastructure	

EDUCATION

King Mongkut's Institute of Technology Ladkrabang — B.Eng., Automation Engineering	Bangkok, Thailand · 2012 – 2016
---	--

SKILLS

Languages	Go, Python, TypeScript, JavaScript, Rust, Shell
Backend	Fiber, NestJS, Express, FastAPI, Django, REST, gRPC, GraphQL, WebSocket, SSE, Webhook
Frontend	React
Messaging	Kafka, RabbitMQ, Redis Pub/Sub, MQTT, Google Pub/Sub
Data	PostgreSQL, MySQL, SQL Server, MongoDB, InfluxDB, Redis, Firebase
Infrastructure	Docker, APISIX, Nginx, Traefik, Linux, CI/CD, AWS, GCP, Virtuozzo, VMware, vSphere
Industrial	PLC, SCADA, Modbus TCP, Profibus, CIP
